
(a) Profile likelihood
Rise of the profile χ^2 above its minimum
$\log_{10} c_s^2$
General model
without $V \geq 0$
without $z = 0.07$
pressureless galaxies
3.84
2.71: 95% limit
$c_s^2 < 7.8 \times 10^{-7}$
8.8×10^{-6}
(b) Posterior density
Posterior density of $\log_{10} c_s^2$
$\log_{10} c_s^2$
Posterior samples
Posterior limit, 3.6×10^{-7}
Profile likelihood, rescaled
profile limit, 7.8×10^{-7}
